EXPERIENCE & PROJECTS

Invent.ai - Jr. Software Engineer, Data Platform | August 2025 – Present

- Built a company-wide **context platform** for AI agents, enabling teams to share business context and reusable workflows; awarded stock options in recognition of the project's impact.
- Delivered **complex codebase migrations** and **upgrades** across projects using **context engineering** and **validation loops**.
- Improved **Spark ETL** pipelines on **Databricks** orchestrated via **Airflow**, maintained **petabyte-scale** data (e.g. delta table vacuumings or compactions), and enabled storage observability features/reports for cutting storage cost.
- Scaled company-wide **data access platform** by agent driven onboardings, improving query reliability and performance.
- Selected as an AI champion; created company wide contents to **boost AI adoption** of Claude Code and Codex.

Ermanreads.com - Side Project | 2026

- **Built** a personal archive research site using AI agents to explore public sources, inspired by **Andrej Karpathy's LLM Wiki**.
- Led **historical discovery** on ancient Sumerian Tablets, Identified textual correspondences across 35 pairs of **ancient Sumerian tablets** using computational text matching, View findings.
  Findings are accepted by the **director of the Database of Neo-Sumerian Texts** (**BDTNS**) for inclusion with attribution in a forthcoming database update.

SunExpress Airlines - Data Science Intern | July – August 2023

- Developed and trained a machine learning model to **predict vacant seats** on upcoming flights with an error rate as low as 3.1%
- Managed the full data lifecycle : Collected, cleaned, and performed **exploratory data analysis** (EDA) using **Python** (**Pandas**, **Matplotlib**, **Plotly**) , followed by model training via **AzureML**.
- Delivered clear and engaging presentations to **senior stakeholders** in the **Frankfurt office**, utilizing analogies, graphs, and visualizations to simplify complex concepts.
- **Proposed actionable use cases** for the prediction model across commercial and operational departments, supporting data-driven decision-making at SunExpress.

Shuttle Tracker - University Project

- Developed campus shuttle tracking devices to provide students with real-time location updates.
- Worked on the backend and data pipelining on hardware (ESP32) and software side of the project.
- Presented the project to the rectorate and jury committee.

EDUCATION

Izmir Institute of Technology - B.S., Computer Engineering, September 2024
Languages - English (C1), German (B1), Turkish (C2)

VOLUNTEERING

English Instructor - **Busan, South Korea**

- I volunteered for 1 month teaching English to Koreans. Learned how to communicate/teach concepts effectively (Photo).

Cultural Exchange - **Geneva, Switzerland**

- Participated in a Workaway program with a Swiss family. Improved my German and French language skills. (Ref)

Volunteer - **Osaka, Japan**

- I participated in a guesthouse for 5 weeks in Osaka. Learned Japanese culture, customer-first mindset, and teamwork.
